• An **immunobiological product** is one which modulates the immune system for the prevention, treatment, or diagnosis of disease. Vaccines, antitoxins, and specific serum or colostrum derivatives are examples of immunobiological products.

• An **adverse event** is any undesirable occurrence after the use of an immunobiological product, whether or not the event was caused by the product.

**List all immunobiological products used.** Note: For a *combination package* (comprised of a vial of dried vaccine which is reconstituted with a vial of liquid vaccine), list the product code and serial number of each vial, as well as the product code of the combination package.
